

AeroPulse

Aviation Route Opportunity Intelligence

Turning complex aviation information into smarter flight decisions

Gracia Emerentiana

Infrastructure Engineer | Analyst

THE PROBLEM: CHOOSING A FLIGHT ISN'T JUST ABOUT PRICE

Which flight should I choose?

Which airline?

What time?

What price?

What experience can I expect?

The information exists — but it is spread across different sources.

WHAT IF ONE TOOL COULD BRING IT TOGETHER?

AeroPulse brings different aviation signals together to help you compare options and make a more informed choice.

MEET THE FLIGHT CHOICE ADVISOR

Choose your journey.
Compare your options.
Understand the recommendation.

AeroPulse ranks the top 3 options for your selected journey — and explains the key factors behind the recommendation.

Route → Month → Time → Traveler → Recommendation

[EXPLORE THE LIVE DASHBOARD](#)

HOW DOES AEROPULSE DECIDE?

From observed aviation data to an explainable recommendation

1. OBSERVE

Flight activity & route patterns

2. ANALYZE

Demand, growth & performance signals

3. COMPARE

Airlines and options for the selected journey

4. RECOMMEND

Rank the strongest options and explain why

WHAT'S BEHIND THE RECOMMENDATION?

- Monthly service activity
- Preferred-time fit
- Route-airline strength
- Price evidence

The production Advisor combines these evidence layers using defined scoring rules. When reliable price evidence is unavailable, the non-price components are normalized rather than penalized.

EXPLORE THE EVIDENCE

The recommendation is only the starting point

1. TIMING INTELLIGENCE

When are flights most active?

2. PRICE INTELLIGENCE

How do observed fares compare?

3. PASSENGER EXPERIENCE

What do passengers report?

Explore the dashboard interactively — choose your own route, month, time and traveler profile, then investigate the evidence behind the recommendation.

Timing, price and passenger experience are complementary evidence layers and remain separate from the core AeroPulse score.

WHAT AEROPULSE DOES NOT CLAIM

Good decisions also depend on understanding the limits of the evidence

① OBSERVED FLIGHT ACTIVITY ≠ SCHEDULE

What we have:

Observed ADS-B flight activity

What we don't claim:

Exact scheduled departure times

Detailed time windows are based on observed first_seen timestamps.

② PRICE SNAPSHOTS ≠ LIVE PRICES

What we have:

Duffel test-mode fare observations

What we don't claim:

Live market pricing

Price observations cover selected routes and departure dates.

③ PASSENGER REVIEWS ≠ OPERATIONAL PERFORMANCE

What we have:

Passenger-review ratings

What we don't claim:

Measured airline operational performance

Reviews represent passenger perceptions in the source dataset.

④ DECISION SUPPORT ≠ PREDICTION

What we provide:

Evidence-based recommendations

What we don't claim:

A guarantee of the future outcome

AeroPulse supports decisions using observed evidence and defined decision rules.

AeroPulse is designed to make decisions more transparent — while making the limits of the evidence explicit.

WHERE COULD AEROPULSE GO NEXT?

From analytical prototype to more timely decision support

MAKE IT MORE TIMELY

Automate monthly aviation-data updates

Move from manual data preparation toward an automated pipeline.

Expand fare coverage

Collect richer pricing evidence across more routes, airlines and dates.

Add operational signals

Integrate:

- Delays
- Cancellations
- Operational reliability

MAKE IT MORE INTELLIGENT

Add weather context

Understand how weather conditions could affect route decisions.

Build richer traveler profiles

Go beyond Business vs Leisure with more personalized decision preferences.

Move toward timely recommendations

Combine more frequently updated evidence to make the decision support more current.

The goal: move AeroPulse from a strong analytical prototype toward a more automated and timely decision-support system.

WHY AEROPULSE?

A better flight decision isn't always about finding the cheapest option.

SEE THE BIGGER PICTURE

Bring route, airline, timing, price and passenger evidence into one place.

COMPARE WITH CONTEXT

Look beyond a single number and understand the differences between options.

KNOW WHY

Get an explainable recommendation instead of a black-box answer.

AeroPulse helps turn scattered aviation information into a decision you can understand and defend.

Thank you
